291 554 The practice and teaching of modesty seem to have been changing considerably for a long time. The influence of Europeans has doubtless had its effect, but more fundamental, it seems, has been the effect of increasingly generalized use of clothing, a process which began perhaps 200 years ago, but is yet far from complete. The time when boy or girl may begin to wear clothing is determined less by age than by the economic status of his family. There seems to be no shame (on the part of the child) connected with late wearing of clothes, but once a child has begun to wear a cloth, he or she is taught that it is shameful to take it off in the presence of those who are older. That this attitude is not of recent origin is attested by its appearance in a biographical narrative which goes back sixty years or more.[1] A large proportion of the women have only enough cloth for workaday wear for a short skirt, so that they leave the torso bare, but once one becomes accustomed to covering the torso always, she would be ashamed not to. This feeling belongs more to the field of economic status than to that of modesty. This shows up clearly in the strong objection to being ragged (*epēlē*), which has nothing to do with modesty but rather with economic status. The narrative concludes the teaching of social usage with this observation: 'From the time that children first enter into the school of understanding (*olondunge*), parents recognize that it is proper to respect them, rather than to revile them or tell them that which is evil.'

868 3. *Training in skills.* Before the age of eight or nine, children acquire few definite skills. Many of their games, however, are in imitation of adult activities, and adults recognize their preparatory nature and value. The little girl in caring for her younger sibling acquires certain skills, but with little or no definite adult guidance. Little boys begin early to make and set traps and snares under the tuition of an elder sibling or cousin. The first rat or bird caught belongs to the tutor. Games of many sorts are played: games with sides, round games, games with an 'It', imaginative games, and competitive games; games demanding skill, especially with dances of some intricacy. Games in imitation of animals are favourites, including 'birdcalls', in which very ingenious words are set to the bird songs.

604 867 4. The Ovimbundu have a custom somewhat comparable to what Vedder calls '*child insurance*' among the Herero,[2] i.e., the

v. Two significant tones on radicals; no tonal alternance on nominal suffixes. In this Umbundu resembles the Lunda-Luena languages."(1)

Childs(2) classifies Umbundu with the Ambo-Herero group as belonging to the Western Province of Southern Bantu. He suggests(3) that the similarity of Umbundu to the Ngangela languages is due to the dominating influence of the Umbundu spoken in Viye (where the racial stock had a greater Ngangela element) over that spoken in other regions. This dominating influence may be explained by the relatively large number of missions in the Viye region, and presumably also by the activities of Viye traders.(4)

Dialectal differences in Umbundu speech are very small. There are certain noticeable differences between "up-country" and "down-country", roughly divided by the Keve and Kunene rivers. Each of the outlying regions has its own peculiarities, often due to foreign influences.(5)

It has been mentioned above that while the homeland of the Ovimbundu is in the Benguella Highland, the use of the Umbundu language is now more widespread. The Nganda and the Hanya tribes are increasingly using it, and the mixed populations of the coastal towns of Lobito, Katumbela and Benguella use it almost exclusively. It is also spoken in Nova Redondo, in Mossamedes, and along the Benguella Railway. This process of "Umbundu-ization" does not seem however to be taking place in Cipala, Sela or Musende, in spite of the long period during which they owned the king of Bailundu as their overlord.(6)

PHYSICAL APPEARANCE AND DRESS

Among the Ovimbundu two main physical types are distinguished by some writers:(7) one is of brown skin colour and slender build, the other a shorter, darker type with more facial hair. No correlation of these types with chiefly families on the one hand and commoners on the other has been recorded. Hambly(8) gives several good illustrations of physical types among the Ovimbundu, and contrasts them with those found among neighbouring tribes.

The Ovimbundu retain distinctive styles of dress, ornament, tooth mutilation (a V-shaped notch in the upper incisors), scarification and hair-dressing. Women are dressed in trade cloth: unmarried girls wear one piece of cloth which hangs from the armpits to the knees, while a married woman drapes herself with two pieces of cloth, a skirt hanging from her girdle, and an upper piece so folded as to hold her baby tightly on her back. Certain cloth designs are considered appropriate for girls, others only for older women. Men now dress usually in European fashion.

Young unmarried girls of the Luvando tribe wear a large number of leg-bands which extend from the ankles to the knees as a sign that puberty has not been reached. These leg-bands are somewhat roughly twisted from fibrous roots and twigs from which the cortex has been removed. Collars of tough, elastic, cane-like substance are worn by Luvando women, and so numerous are these that the neck is entirely covered. These cane neck-bands are ornamented with burned, incised, geometrical patterns, and, in keeping with other ornaments, are thickly smeared with grease and red powder from *tukula* wood (Plate LIX, Figs. 1, 2).

Women of the Vakipungo and Vakuanyama wear heavy coils of brass or copper wire on their forearms. In southern Angola women wear bracelets of twisted wire which are identical with those worn by Zulu women. Bracelets of beaten trade brass, ornamented with incised geometrical designs, are worn by women of the Ovimbundu, Vakuanyama, Luvando, and Vakipungo tribes. Ovimbundu women now depend largely on trade goods for personal ornament.

Ovimbundu men and women are dressed in trade cloth. Unmarried girls wear one piece of cloth which hangs from the armpits to the knees. A married woman drapes herself with two pieces of cloth, a skirt hanging from her girdle, and an upper piece so folded as to hold her baby tightly to her back. Men wear a single piece of cloth as a skirt; the upper part of the body is bare (Plates XLIX–LI). From the region of Kipungo to the southern border, clothing is of leather. The Vachokue wear trade cloth or bark cloth.

Hairdressing is of many styles. Ovimbundu women braid their hair neatly in strands across their foreheads, and small blue and white trade beads are used to decorate the braids. The hairdressing of the Ovimbundu women is different from that in any other part of Angola. At an early age the hair is trained into two long loops at the back of the head. Then these are covered with black cloth which is bound tightly. The two loops are afterwards studded with brass-headed tacks obtained from a store (Plate XL, *Fig.* 3).

Luvando women in the region of Kipungo dress the hair to form a large triangular projection from the back of the head. Girls of the Vaheneca tribe near Huila mass the hair with clay to form large "cock's combs." Women of Gambos pass each small plait of hair through hollow reeds. Humbe women do not redden or grease their hair which is massed into three high ridges on the top, while at the sides there are hornlike projections. Vakuanyama women dress their hair with grease and *tukula* powder. A principal wife builds up her

In addition to pouches, hide is used by the Ovimbundu for the seats of four-legged wooden stools. Before stretching the hide over the wooden frame the edge of the leather is cut into strips which are interlaced on the under side of the stool (Plate XVIII, Fig. 1). There are few evidences of the hide having been dressed; usually the hair is attached. The Ovimbundu understand the dressing of hides in a crude way. The hide is soaked, after which the inner surface is rubbed with ashes. The hair is scraped away and the hide is tightly pegged out. Hide was formerly used for covering wooden boxes in which a king carried his powder and possessions to war. Scraped hide is used to form the tympanum in tubular wooden druma.

In only one part of Angola, notably in the south among the Vakuanyama, is leather used as clothing. Women wear pleated skirts of hide and several broad leather belts, while the men have small leather aprons in front and behind. Men only are the leather workers. The hide is soaked and trampled under foot for many hours in order to soften it and make it pliable; the hair is not removed. Before leather clothing is worn it is thickly greased with a mixture of fat and red powder from *tukulo* wood (Plates LXV, Figs. 1–3; LXVII, Fig. 1).

SPINNING AND WEAVING

My interpreter Ngonga remembers the use of a heavy upright loom about twenty years ago, but this loom is not used at the present time among the Ovimbundu. The Ovimbundu have been in contact with Europeans for three centuries. This has not been a close and permanent contact, but it has been sufficient to account for the disappearance of a one-time essential art. There are in Elende some very fine raffia palm trees, but no use is made of the leaf fiber for manufacturing clothes. Bark cloth is not made by the Ovimbundu of Elende, but I have seen the Vangangella and Ovimbundu of Ngalangi engaged in stripping, beating, and preparing bark for use as clothing, which is formed of one piece wound round the body. The bark cloth is not dyed or decorated with patterns.

Frequently at Elende men are seen engaged in spinning cotton which is used for repairs, and not for fabricating garments. The cotton is obtained from a shrub which has reddish leaves and yellow flowers. The cotton may be seen protruding from the calyx in the months of June and July. The man who is winding holds high in his left hand a slender stick which is wrapped for a length of two feet with fluffy cotton. All work of pressing and twisting the cotton into a thread is done by the thumb and index finger of the right hand.
